

Hello my dear customer!

Thank you for downloading that model, I hope you will like it!

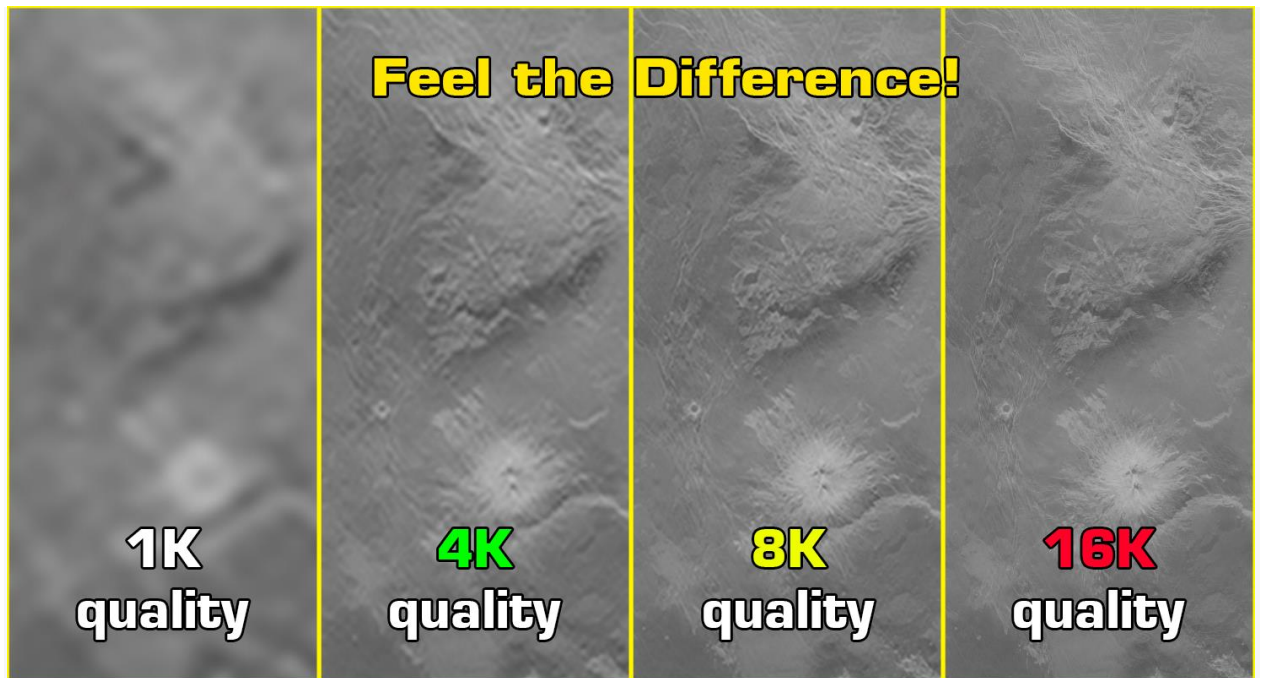

It's a Free Preview model of the full serie, called "**Venus Photorealistic**":

www.turbosquid.com/Search/Index.cfm?keyword=gerhald3d+venus&media_typeid=2

So, that model is the same and the ONLY difference is **TEXTURES QUALITY**.

THAT SERIES INCLUDES:

- Venus Photorealistic 4K - 49\$
- Venus Photorealistic 8K - 79\$
- Venus Photorealistic 16K - 119\$

ADVANTAGES of my models:

- **NO ANY ARTIFACTS, NO POLES**
- **NO VISIBLE SEAMS**
- **ABSOLUTELY CLEAR**
- UV map made in cubic projection as you can see on the preview photo, which:
 - 1) Saves 85% polygons in comparison with UV-sphere.
 - 2) Super simple cubic UV-map with no any stretching.
 - 3) I repeat that one more time: **NO ARTIFACTS ON POLES AND NO VISIBLE SEAMS** (because of **edge padding** made and **cubic projection**)
- Smoothable.
- All materials and textures are intelligently named.
- Formats .obj, .fbx are included.

You will definitely not find such textures for free in internet, I already tried)

If you like that model, then don't be too lazy and give it good rating! 😊

You can find my other models by that link:
